This is a treatise on 60 wild plants found growing in the region between the Yangtze and the Huai Rivers (Hupeh, Honan, and Anhwei) and suitable for food during famine. For bibliographical notes see the account by W. T. Swingle in the Rep. Libr. Congr. **1929**: 321-323; **1935**: 201-202. The original edition is unknown, but the author's preface is said to be dated 1524. Reprinted, 1639. For supplement see Yao K'o-ch'êng, [about 1630].

**Wang Shih-mou** 王世懋.

1587. Hsüeh pu tsa-su 學圃雜疏.

For data on this Chinese work with early references to maize in China see the account by W. T. Swingle in Rep. Libr. Congr. **1933**: 121. 1934.

**Wu Ch'i-chün** 吳其濬 (tzü, **Yo-chai** 淪齋).

1848. Chih wu ming shih t'u k'ao 植物名實圖考

This illustrated treatise on the botany of China containing 1714 plates is the most important source of Chinese information on native plants. There has been prepared and photostated by the Bureau of Plant Industry, U. S. Department of Agriculture, Washington, an index entitled, "Indexes to the great Chinese botany Chih wu ming shih t'u k'ao", prepared in three parts, 1912-22. This index, along with Jinzo Matsumura's Shokubutsu mei-i (Matsumura, J., 1915-16, main bibl.), will be of great assistance to users in reaching the valuable information contained in it. However, Matsumura refers in part I to a very rare Japanese edition. There is now frequently offered for sale a Chinese facsimile reprint made in 1915 in Yunnan from this rare Japanese edition. For further discussion of this Yunnan reprint see W. T. Swingle's account in Rep. Libr. Congr. **1929**: 326-327. 1929. Another edition, identical with the earlier ones, was published at Tai-yuan-fu, Shansi, in 1919. A smaller edition in two volumes, bound in western style and containing a character-stroke index, was published by the Commercial Press in 1919 with the binders title: Readings in Chinese plants. The Library of Congress, Washington, contains the copy of the first edition of this work originally in the private library of A. Henry. It contains many manuscript notes, largely economic, and identifications of numerous species. Many translations from this work have been made by M. J. Hagerty. For additional comments and re-

views see Bretschneider, E. V., 1882-96 (16: 72-75), Liou, Ho, and Roux, C., 1927-28 (p. 355), Hemsley, W. B., 1883, and Pauthier, G., 1864, (all in main bibl.).

**Wu I-lo 吳儀洛** (*tsü*, **Tsun-ch'êng** 遵程).

1757. Tsêng ting pên ts'ao ts'ung hsin 增訂本草從新 [Enlarged and revised new materia medica.]

See Liou, Ho, and Roux, C., 1927-28 (3: 15) and Courant, M., 1900-10 (no. 5333), (both in main bibl.).

**Yao K'o-ch'êng** 姚可成.

[About 1630] Chiu-huang yeh p'u pu i 救荒野譜補遺.

A rare supplement to the Yeh ts'ai p'u 野菜譜 by Wang P'an 王磐 (reprint, 1640). For critical

data on the various editions see Rep. Libr. Congr. 1935: 202; 1936: 189-190.

**Yao Kuang-hsiao** 姚廣孝, and others.

1403-09. Yung-lo ta tien 永樂大典 [Imperial encyclopaedia compiled by imperial order during the era Yung-lo.]

An encyclopaedic dictionary of unparalleled bulk compiled from 1403 to 1409. For additional notes see the account by W. T. Swingle in Rep. Libr. Congr. 1923: 187-195; 1927: 264-266.

**Yeh Kuei** 葉桂 (*tsü*, **T'ien-shih** 天士).

1724. Pên ts'ao ching chien yao. 本草經簡要.

A small Chinese herbal of several editions, containing an explanation of the essentials of the Shên-nung, Pên ts'ao ching (see Shên-nung, —). For biographical notes see the account by W. T. Swingle in Rep. Libr. Congr. 1930: 377.

## JAPANESE WORKS

THIS SECTION IS REFERRED TO IN THE MAIN BIBLIOGRAPHY AS THE "JAPANESE APPENDIX." CROSS REFERENCES IN THE ANNOTATIONS REFER TO THIS APPENDIX UNLESS DESIGNATED AS "(MAIN BIBL. )" OR "(CHINESE APPEND. )"

**Abe, Yoshito** 阿部喜任 (*pen name*, **Rekisai** 磯齊).

1837. Sômoku sodate gusa kôhen 草木育草後編. [On the cultivation and care of plants. Second series.] 2 v. (1, lvs. 1-32. *illustr.*; 2, lvs. 1-38. *illustr.*).

A continuation of Iwasaki, Tsunemasa, 1818.

**Fukae, Sukehito** 深江輔仁 (= **Fukai, Hojin**).

898-900. Honzô wamei 本草和名 [Nomenclature of materia medica.]

A Japanese herbal, giving notes on 1025 medicaments, mostly plants, of the Chinese materia medica and their Japanese equivalents. A later edition appeared in 1798. For critical notes see the account by W. T. Swingle in Rep. Libr. Congr. 1931: 303-304 (the author's name erroneously given as Fukai, Sukehito).

**Hiraga, Gennai** 平賀源内.

1763. Butsurui hinjitsu 物類品隲 [Manual of drugs and foods.]

This Japanese work is listed in Geerts, A. J. C., 1878-83 (main bibl.).

**Hobashi, Yasukuni**. See Tachibana, Yasukuni, 1755.

**Iguchi, Mochiyuki** 井口望之.

1850. Honzô kômoku keimô zufu 本草綱目啓蒙圖譜 [Illustrations for the Honzô kômoku keimô.] 2 v.

Consists of illustrations for Ono, Ranzan, 1847, with brief text in Japanese.

**Inau, Nobuyoshi** 稻生宣義 (*pen name*, **Inau Jakusui** 稻生若水).

1714. Honzô kômoku 本草綱目 (or "Pên ts'ao kang mu"). 61 books.

A punctuated Japanese reprint of the standard Chinese treatise on materia medica, Pên ts'ao kang mu (see Li Shih-chên, 1590 in Chinese append.) revised by Tô Jakusui 稻若水 (or Jakusui Tô, the name the author used for himself). For a discussion see Rep. Libr. Congr. 1927: 277. It contains two supplements: (1) Honzô zuyoku 本草圖異, concerning drawings and notes on medicinal plants, and (2) Keppatsu besshû 結髮別集, written under a different author's pen name, Keppatsu, concerning plants recently introduced into the Orient.

**Itô, Ihei** 伊藤伊兵衛.

1710. Zôho-chikin-shô. 増補地錦抄 [An illustrated treatise on plants, flowers, and herbs.] Books 1-8, 1710; books 9-16, 1719; Suppl. books 1-3, 1733.

This old Japanese work contains treatments of various groups of plants. Books 9-16 constitute an extensive revision and enlargement of books 1-8, under the title: Kôeki chikin-shô 廣益地錦抄.

**Iwasaki, Tsunemasa** 岩崎常正.

1818. Sômoku sodate gusa 草木育草 [On the cultivation and care of plants.] 2 v. (1, lvs. 1-47. *illustr.*; 2, lvs. 1-50).

A manual in Japanese bound in Japanese style, containing descriptions of 185 plants (without Latin names). For continuation see Abe, Yoshitô, 1837.

1828. Honzô zufu 本草圖譜 [Illustrated manual of medicinal plants.] 6 books, 1828; later edition, 93 books, 1920; index 2 books, 1922.

For further details of this Japanese book containing descriptions and illustrations see Iwasaki, T., 1828, and Shirai, M., 1926b, p. 225, (both in main bibl.). For comments on the ferns see Makino, T., 1918h (in main bibl.).

See also in main bibliography.

**Jakusui Tô.** See Inau Nobuyoshi.

**Kaibara, Atsunobu** (or, **Tokushin**) 貝原篤信 (*pen name*, **Ekiken** 益軒).

1698. Ka-fu 花譜 [Manual of flowering plants.] 5v. (1, lvs. 1-24; 2-3, lvs. 1-58; 4-5, lvs. 1-47).

A work written and bound in Japanese style, containing brief descriptions of about 200 species with Chinese and Japanese names, originally published in 1694. Reprinted without change in 1844.

1709. Yamato honzô 大和本草 [Great Japanese materia medica.] 16 books, 2 suppl. bound in 10 v. 1709; suppl. (Yamato honzô furoku.) 大和本草附録 2 v. [no date]; second suppl., 3 books of illustrations, 1715.

This work is said to be the first truly scientific work on Japanese materia medica written in Japanese. The first book discusses works on materia medica, the second discusses materia medica, and the others contain descriptions of 1362 species of plants as well as animal and mineral sources of medicines. The first supplement contains illustrations. It was reprinted in 1756 and 1760. Other editions have not been seen. The edition of 1756 bears the title: Yamato honzô kômoku. [Principal plants of the Japanese materia medica.] A recent edition, bound in western style, has been issued, v. 1 (1932); v. 2 (1936). For additional data see the report by W. T. Swingle in Rep. Libr. Congr. 1931: 304-305. See also Naoumi, Ryû, 1755-57 and Shirai, M., 1926b, p. 218 (main bibl.). For extracts see Imai, Sanshi, 1933c (main bibl.).

1714. Sai-fu 菜譜 [Manual of edible plants.] lvs. 1-90.

A work written and bound in Japanese style, containing brief descriptions of 136 garden plants, marine algae, and fungi.

**Kiyohara, Shigeomi** 清原重臣.

1823. Sôroku seifu 草木性譜 [On the nature of plants.] 3v. (1, lvs. 1-23. *illustr.*; 2, lvs. 1-31. *illustr.*; 3, lvs. 1-29. *illustr.*).

A work written and bound in Japanese style, containing general descriptions of plants.

- 1827a. Yûdoku honzô zusetsu 有毒本草圖説 [Illustrated treatise on poisonous plants and trees.] 2 v. *illustr.*

A work in Japanese, considered as a supplement to the preceding entry. (See Serrurier, L., 1896, in main bibl.).

- 1827b. Yûdoku sôroku zusetsu 有毒草木圖説 [Illustrations and descriptions of poisonous plants.] 2 v. (1, lvs. 1-32. *illustr.*; 2, lvs. 1-32. *illustr.*).

A work written and bound in Japanese style. Sometimes the author has erroneously been given as Toneri Bushio.

**Maeda, Toshiyasu** 前田利保.

- [No date] Honzô tsûkan 本草通貫 [Collection of writings on materia medica.] 45 books bound in 33 volumes.

This is said to be the most voluminous Japanese herbal extant. For additional notes and notice of review in Japanese see the report by W. T. Swingle in Rep. Libr. Congr. 1931: 307.

**Nakamura, Nakamura** (pen name, **Tekisei** 笛聲).

1695. Kashiragaki zôho kummô zu-i 頭書増補訓蒙圖彙 [Illustrated cyclopaedia with text above. Revised and enlarged.]

Only parts 17 to 20 of this Japanese work dealing with various cultivated plants have been seen. For information on dates, editions, and French translation of this work see Serrurier, L., 1896, p. 2, no. 2 (main bibl.).

**Naoumi, Ryû** 直海龍 (pen name, **Genshû** 元周).

- 1755-57. Kô yamato honzô 廣大和本草 [Enlarged edition of "Yamato honzô."] 10 v. 1755; Supplement (Betsu roku 別録) 2 books, 1757.

Purported to be an enlarged edition of Kaibara, Atsunobu, 1709. For other notes see the report by W. T. Swingle in Rep. Libr. Congr. 1931: 305-306.

**Noda, Seika** 野田青霞.

1850. Jippin-kô 拾品攷 [Treatise on ten plants.] [i-ii], lvs. 1-28.

A Japanese work with descriptions and drawings of some common species.

**Ohara, Gensaburô** 小原源三郎 (pen name, **Tôdo** 東洞).

1833. Tôdô ihitsu. 東洞遺筆 [A botanical treatise.] 3 books. *illustr.*

Consists of extracts from other Chinese and Japanese books, supplemented by the author's observations.

**Ôhno [Ô-no], Yasumaro 太安萬呂.**

712. Kojiki (Furu-koto-bumi). 古事記 [Records of ancient matters.]

This work in Chinese and Japanese is the oldest Japanese history and contains much mythology. For botanical contents see Shirai, M., 1932 (main bibl.). For English translation see Chamberlain, B. H., 1932 (main bibl.). See Serrurier, L., 1896 (main bibl.), p. 98, for bibliographical data.

**Okamoto, Ichiku (editor) 岡本爲竹.**

1698. Kôeki honzô taisei 廣益本草大成 [Cyclopaedia of universal herbs.] 23 books bound in 10 v.

A work written and bound in Japanese style containing descriptions of 1834 medicinal plants, the data largely compiled from Chinese sources. The preface is by Suzuki, Sôin, 鈴木宗因. The revised edition appeared under the title: Wago honzô kômoku 和語本草綱目.

**Ono, Ranzan 小野蘭山.**

[1820.] Honzô kômoku kibun 本草綱目紀聞 [Records of important medicinal plants.] 22 books.

This Japanese work, containing descriptions of 1651 plants, was never printed. A manuscript copy is in the Library of Congress, Washington, dated 1820. The author's dates are 1729-1810.

1837. Shitsumon honzô. 質問本草.

See Iha, F., 1932 (main bibl.) for discussion in Japanese of this book, doubtfully attributed to Ono Ranzan. In the discussion by Shirai Mitsutarô 白井光太郎 (Shirai, M., 1926b in main bibl.) mention is made of an illustrated description of the plants of the Liu Kiu Islands under this same name, published in 1879.

1847. Honzô kômoku keimô 本草綱目啓蒙 [Guide to the principal medicinal plants.] Revised and enlarged edition, 48 books, bound in 20 v.

A work written and bound in Japanese style. The first edition was published in 1803, the second in 1829. For illustrations see Iguchi, Yoshiyuki, 1850. For comments on the various editions see Makino, T., 1919 (main bibl.).

**Sakamoto, Juntaku 坂本純澤 (pen name, Kôzen 浩然).**

1834. Kin-fu 菌譜 [Treatise on fungi.] 2 v.

This work is reported to concern over 300 species.

**Shimada, Mitsufusa 島田充房 (pen name, Yonan Si).**

1759. Ka i. 花彙 [A collection of flowering plants.] 8 books.

An important unpagged work in Japanese which describes and illustrates many species. It was reprinted in 1765. For French translation see Savatier, L., 1873 (main bibl.). It is reviewed in Hemsley, W. B., 1894a (main bibl.). The illustrations in the section on shrubs are said to be drawn by Ono Ranzan, these discussed in Makino, T., 1929f (main bibl.). See also Shirai, M., 1926b (main bibl.), p. 218.

**Tachibana, Yasukuni 橋保國.**

1755. Ehon noyama gusa 繪本野山草 [Collection of wild plants.] 5 v.

This unidentified Japanese work is listed in Jackson, B. D., 1881, p. 381 (main bibl.) under the author's Buddhist name, Hokk'joo Hookoku [Hokkyô Hôkoku] 法橋保國, with reference to an edition of 11 volumes published in 1808.

**Tamba, Yorimasa 丹波頼理.**

1806. Honzô yakumei bikô wakun shô 本草薬名備考和訓抄 [Complete examination of the names of substances in materia medica with their Japanese equivalents.]

A treatise on the names of plants and other substances used in medicine. Critical notes on this and the revised edition (see Yamazumi, Ennen, 1831) are to be found in the account by W. T. Swingle in Rep. Libr. Congr. 1931: 307.

**Tô Jakusui.**

See Inau Nobuyoshi.

**Tomomura, Tsunehisa 殿村常久.**

[18th Cent.] Chi gusa no nezashi 千草の根ざし. [A treatise on all species of plants.] 1 book+.

The first book is reported to deal with 20 flowering plants. No date of publication is known. The author lived in the 18th century.

**Toneri Bushio. See Kiyohara, Shigeomi, 1827b.**

**Uchiyama, Kakujun 内山角順.**

1758. Sômoku benge 草木辯解 ["Discriminating between doubtful points concerning plants and trees."] 3 books in 4 v., 1758; new ed., 1759.

A critical work in Japanese concerning the names of drugs, and containing much other interesting material. For other critical notes see the account by W. T. Swingle in Rep. Libr. Congr. 1931: 306-307.

**Yamazumi, Ennen 山澄延年.**

1831. Kô tei honzô yakumei bikô wakun shô 校訂本草薬名備考和訓抄

A revised edition of Tamba, Yorimasa, 1806. For discussion by W. T. Swingle see Rep. Libr. Congr. 1931: 307.

## REFERENCE LISTS OF ORIENTAL SERIALS

In the following lists the serials cited in this bibliography are arranged systematically by their full titles, rather than alphabetically by abbreviations, as they appear in the reference list at the beginning of this bibliography. Here are recorded the full titles, both foreign and vernacular (the latter in characters and transliteration), data on issues published or examined in the course of preparing this bibliography, and the abbreviations used in the citations. Character-stroke indexes of vernacular titles are given on pp. 568 and 578 and alphabetical indexes of transliterated titles are given on pp. 569 and 580.

The arrangement of these serials follows approximately the system used in the Union List of Serials, published by the American Library Association. Periodical titles are of two types, first, those with distinctive titles (example, "Entomology and Phytopathology", published by the Bureau of Entomology, Hangchow), and second, those with titles bearing the names of the organizations publishing them (example, the "Journal of the Agricultural Association of China"). Serials of the first type will be found in this list under

the distinctive title in the proper alphabetical position. Serials of the second type are to be found under the titles of the organizations publishing them. Thus the "Journal of the Agricultural Association of China" will be found under Agricultural Association of China. Cross references will be found under the titles of the organizations publishing serials with distinctive titles; for example, under China (government publications), Bureau of Entomology, Hangchow, will be found a cross reference to Entomology and Phytopathology. Every serial which has a title in characters only (that is, which bears no title in a western language) is listed under the translation of the title, if it be a distinctive title, or under the translated name of the organization publishing it, if it does not have a distinctive title. Thus the 農事雙月刊 is listed under [Agricultural bimonthly, published by Lingnan university]. The 廈大生物學會期刊 is listed under Amoy university, [Biological association, Bulletin]. The precise location of such serials, as well as all others with vernacular titles, can be found by referring to the character-stroke indexes and the indexes of transliterated titles.

## REFERENCE LISTS OF ORIENTAL AUTHORS

The following lists contain all the Chinese and Japanese authors cited in this bibliography, excluding those in the appendices, together with their oriental characters and full romanizations, except where these could not be obtained from the publications cited. There is great diversity in the systems in common use in transliterating Chinese names in current publications, and considerable diversity in rendering Japanese names. It has been the desire of the authors of this bibliography to list all the papers by a particular author under one form of romanization of his name. Since authors do not always use a standard transliteration, and because users seeking an author's works may not know the spelling under which his papers may be found, these

reference lists have been prepared. The Wade system of romanization for Chinese and the Hepburn system for Japanese have been used. Whenever a Chinese author's name is used in a form differing from that required by the Wade system, such name is given in the following list in italics with cross references from the standard form. Thus it should generally be possible for users of this bibliography to secure the characters and the standard transliteration for any cited oriental author's name and the non-standard transliteration, if any, preferred by the author. For further information on the romanization of oriental author's names in this bibliography see p. vi of the introduction.

## SUBJECT INDEX \*

The non-alphabetic arrangement of the main headings in the following Geographic and Systematic indices has been adopted in order better to bring together material on related subjects and on adjacent areas. These three indices are not to be considered as three approaches to the same material, for comparatively few references are cited in more than one index. Usually technical treatments of taxonomic groups in certain limited geographic areas are indexed only in the Systematic Index. The numerous cross references should be found to be valuable guides to material on related subjects. For an understanding of the subdivisions in the Geographic Index one should refer to Map 1, p. 594. It will be noticed in the index that general works precede the more limited ones. Therefore, in order to secure the greatest amount of information on a given subject, *one should proceed from the specific to the general, from the lesser region to the greater.*

Users are warned not to expect too much from this index. The difficulties in arranging the widely diverse subjects included have at times been almost insurmountable. It must be remembered that the index is based on the information in the titles and annotations. The limitations thus imposed are discussed in the introduction, p. vii. The index must therefore be supplemented by various reference works. These also are discussed in the introduction, p. viii.

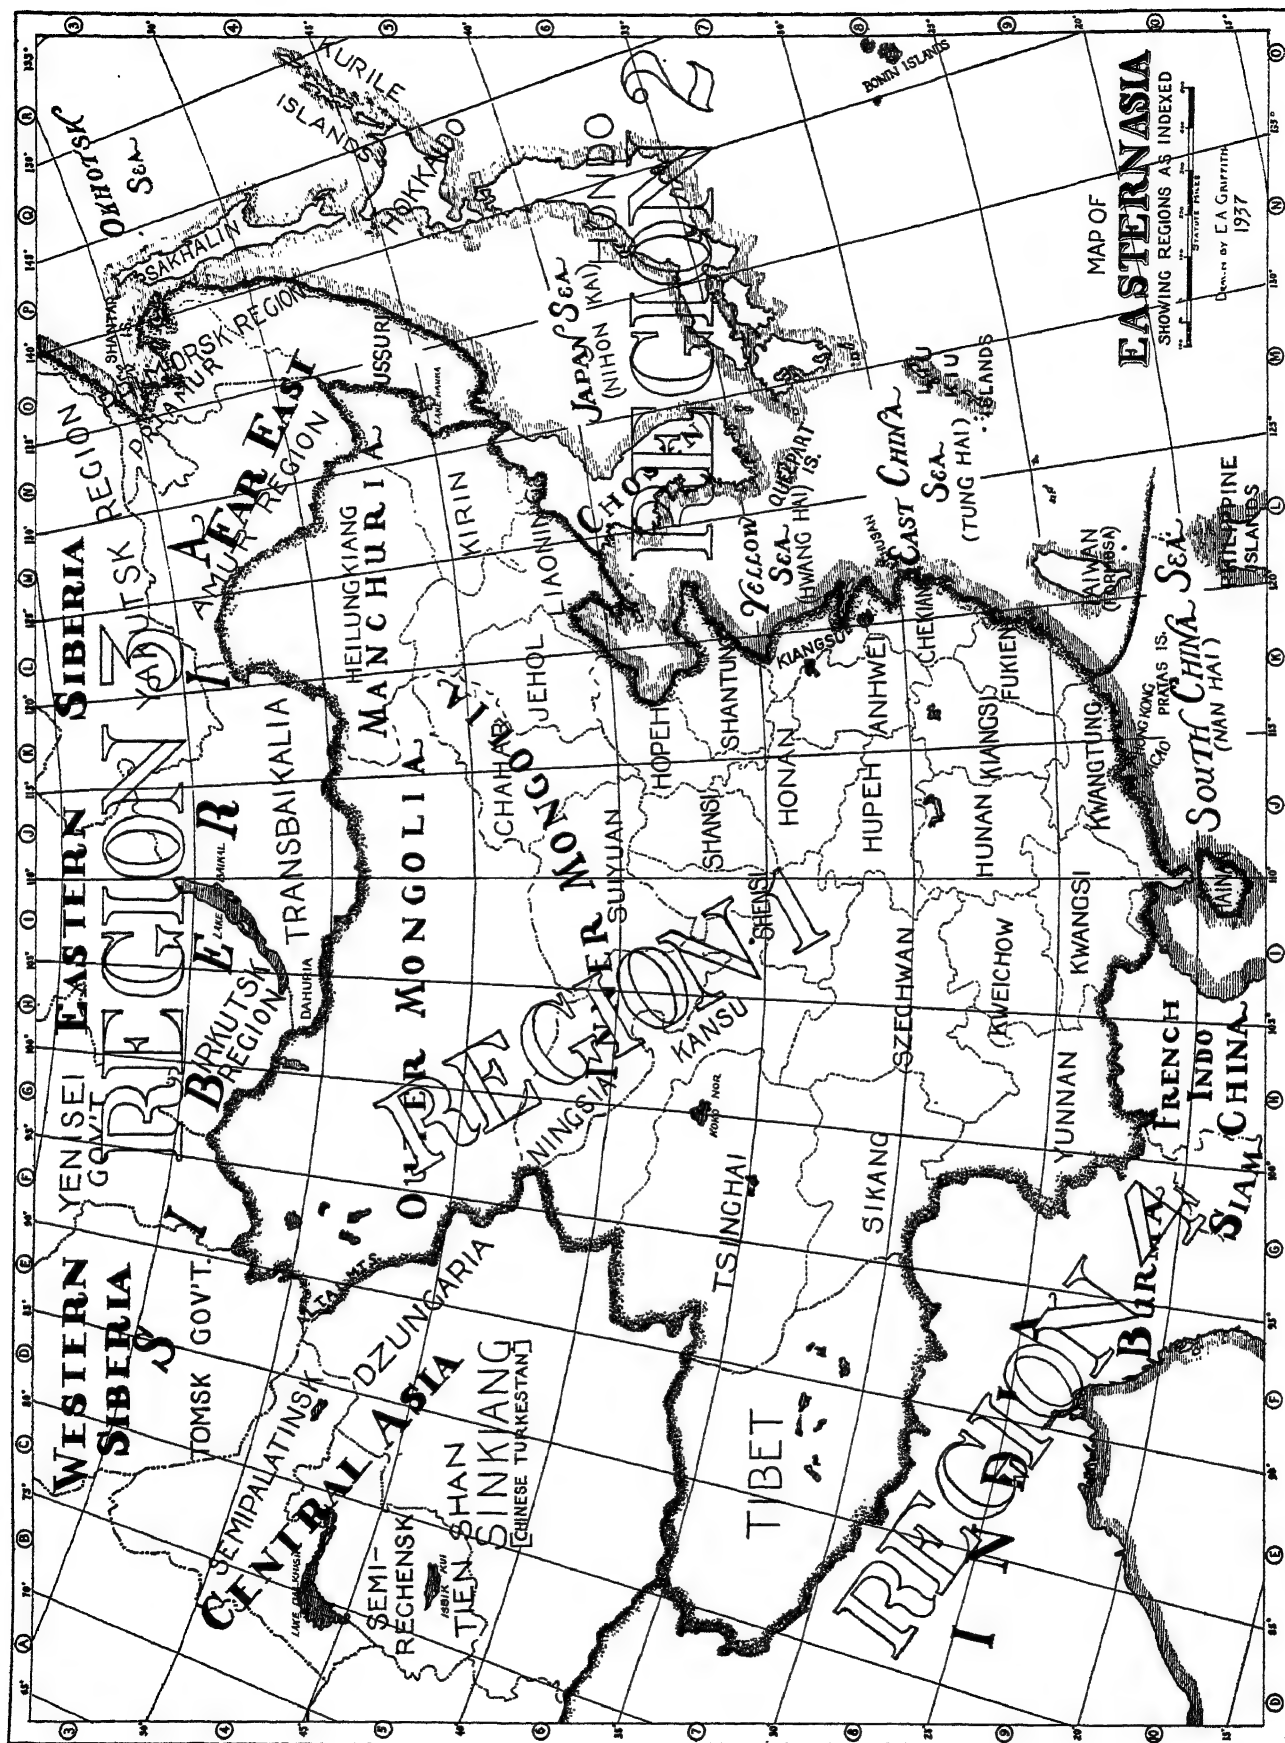

The arrangement of the Systematic Index follows that given in the 1936 edition of A. Engler's "Syllabus

der Pflanzenfamilien." Exceptions occur in certain groups of cellular cryptogams and in the Coniferae in order to follow more commonly used arrangements. As little attempt has been made to adjust the synonymy, the same species may be considered under several names. To assist in the location of genera of the pteridophytes and seed plants when the families are not known, one should refer to the alphabetic reference list, p. 713-718. An alphabetic list of geographic names with page references and map coordinates is provided on p. 719.

Taxonomists not primarily interested in the flora of eastern Asia should find much of value in this index, because of the inclusion of references to numerous revisions and monographs referring, at least in part, to other parts of the world. Plant anatomists (especially wood anatomists), morphologists, physiologists, plant pathologists, and others will find here many references containing bibliographies relating to these special fields.

The geographic boundaries, especially the more general ones, given in the Geographic Index are frequently not precise. Political boundaries, as usually accepted, have changed considerably during the time covered by this bibliography and authors vary in their uses of the same names. For example, the Far East in Russian literature refers to that part of Siberia comprising the Maritime Provinces (Primorsk, Primur, and Kamchatka) and Amur Province. In the literature of other European and of American writers the Far East usually means China and Japan. One should therefore examine references cited in contiguous areas.

\* Prepared by the junior author except as otherwise accredited under selected headings.
